

HomeOS

Product Roadmap · V1 → V3

A simple evolution from organizing the home, to acting on the user's behalf, to proactively sensing what needs attention.

V1 ORGANIZE	V2 ACT	V3 SENSE
Complete HomeOS experience Build the complete UI and core home-management foundation. - Home inventory - Rooms & categories - Asset details - Reminders, maintenance & repairs - Warranty, finances & documents - Upload / Take Photo AI - Add Anything AI: Photo → Identify → Suggest → User confirms → Asset created	AI agents that get things done Introduce specialized agents for repairs and servicing. - Identify repair/service needs - Find service providers - Fetch contact details & availability - Present options - Book appointments with user approval Experience: Need → Agent → Service → Booking	AI Sense Notice meaningful changes and issues instead of waiting for the user. - Detect unusual patterns - Track issues - Understand context - Recommend a solution - Provide a clear action UX: Context → Insight → Recommendation → Action

V3 Example

Context	Your electricity usage is 21% higher than usual.
Insight	The biggest change is your bedroom AC, whose last service was 8 months ago.
Recommendation	I recommend getting it checked.
Action	I found available service slots.

The evolution

V1 — “Here is your home.”

HomeOS creates a clear digital representation of everything the user owns and manages.

V2 — “I can help manage it.”

Specialized agents can take approved actions around repairs and servicing.

V3 — “I noticed something. Here’s what I recommend.”

AI Sense connects signals and context to surface useful insights and actionable next steps.
